

Amendments to the Immigration and Foreigners Rules, 2025

Source: IE

The **Ministry of Home Affairs (MHA)** has notified crucial amendments to the **Immigration and Foreigners Rules, 2025** , tightening the registration timeline for foreign nationals seeking stay extensions and revising citizenship regulations for minors.

- **Revised Registration Timeline:** Foreigners arriving in India on a **visa of 180 days or less** who intend to extend their stay must now register "**any time before the expiry of the 180-day period**" , replacing the earlier window that allowed registration within 14 days *after* the expiry of 180 days.
- **Stricter Norms for Multi-Entry Visas:** Foreigners holding visas valid for more than 180 days, but with the condition that each stay should not exceed 180 days, must also register before the 180-day limit if they wish to stay longer. Such permission will now be granted only in emergent circumstances.
- **Relief for Newborns of Mixed Parentage:** The mandatory **30-day electronic intimation rule** to the registration officer upon the birth of a child to foreign nationals **will no longer apply if one of the parents is an Indian citizen** who wishes to retain the child's Indian citizenship.
- **Delayed Foreign Citizenship Clause:** If a child of mixed parentage acquires **foreign citizenship at a later stage while in India** , the parents are legally obligated to inform the registration officer **within 30 days of acquiring such foreign citizenship** .
- **Medical Institutional Compliance:** The notification has updated the administrative reporting requirements and compliance procedures for all **hospitals, nursing homes, and medical facilities** that provide lodging or medical services to foreign nationals.
- **Broader Citizenship Framework:** These changes follow internal security tracking metrics, including draft amendments to the **Citizenship Rules, 2009** (requiring declarations regarding passports from Pakistan, Afghanistan, and Bangladesh) and the **Citizenship (Amendment) Rules, 2026** , which introduced **electronic Overseas Citizen of India (e-OCI) cards** .

Mission Senehjori

Source: PIB

Recently, the Union Minister for Development of North Eastern Region (MDoNER), along with the Assam Chief Minister, launched Mission “Senehjori” – Assam Muga Silk USP, a cluster-based initiative to **transform the state’s Muga silk sector**.

- Muga silk is the **world’s only naturally golden silk**, obtained from the silkworm *Antheraea assamensis*, which feeds on Som and Soalu host plants.
- It is closely tied to Assam’s cultural heritage and is India’s first **GI -tagged silk**, valued for its natural golden colour, durability, and suitability for luxury textile markets.

Mission Senehjori

- **About:** Mission “Senehjori” is a **cluster-based initiative** for Assam’s Muga silk sector, launched by the **Ministry of Development of Northeastern Region** in collaboration with the **Government of Assam, Central Silk Board** and other stakeholders.
 - It will be implemented across key Muga-producing clusters in districts such as **Jorhat, Sivasagar, Lakhimpur, Dhemaji, Dibrugarh, Tinsukia, Majuli and Sualkuchi**.
- **Objective:** To develop a premium, traceable, export-oriented, and globally competitive luxury silk ecosystem while strengthening Assam’s cultural economy.
- **Financial Outlay:** Estimated investment of ₹396-411 crore over three years, including ₹136-151 crore from MDoNER.
- **Livelihood Importance:** Supports nearly 2.6 lakh rearer and weaver families, aiming to enhance incomes and monetise the sector.
- **Value Chain:** The mission will strengthen **host-plant cultivation, silkworm seed production, reeling**, weaving, branding, quality assurance, export promotion, digital traceability, and tourism.
- **Institutional Support:** Promotion of **Farmer Producer Organisations (FPOs)**, Common Facility Centres (CFCs), Farmer Interest Groups, GI authentication, and global market access under the unified “Senehjori” brand.
- **Targets by 2028:** Establish five modernised Muga reeling units and a Muga Spun Mill, create 30 FPOs and over 1,180 Farmer Interest Groups, regenerate 5,000 hectares of Som and Soalu host plants, and GI-authenticate over 80% of traded Muga silk with digital traceability.
- **Silk Tourism:** Development of a Muga Silk Trail, Silk Tourism Park, and annual Muga Utsav festivals to promote Assam’s silk heritage and cultural economy.

V. V. S. Aiyar

Source: PIB

The Vice President of India paid homage to the great freedom fighter, revolutionary, and Tamil scholar **Varahaneri Venkatesa Subramaniam Aiyar (V. V. S. Aiyar)** on his death anniversary (3rd June).

- **Early Life & Transition:** Born in Tiruchirappalli (2nd April 1881), he travelled to London in 1907 to study law but decisively shifted his path to become a committed revolutionary.
- **India House & Savarkar:** In London, he became a core member of **India House** (founded by **Shyamji Krishna Varma**) and worked closely with **Vinayak Damodar Savarkar** in the secret **Abhinav Bharat Society**, supporting revolutionary activities and facilitating the clandestine movement of arms into India.
- **Pondicherry Trio:** To evade British intelligence, he escaped to the French territory of **Pondicherry in 1910**, where he formed a formidable intellectual and revolutionary network alongside nationalist poet **Subramania Bharati** and spiritual leader **Aurobindo Ghosh**.
- **The Ashe Assassination (1911):** Historically recognized for his role as a mentor, he secretly provided arms training to the young revolutionary **Vanchinathan**, who subsequently assassinated the tyrannical British Collector of Tirunelveli, **Robert Ashe**.
- **Journalism & Mainstream Politics:** During World War I, he aligned closer to the **Indian National Congress**, edited the Tamil daily **Desabhaktan**, and was ultimately imprisoned for **sedition in 1921**.
- **Nationalist Convictions:** Despite qualifying as a barrister, Aiyar refused the title as it required an oath of allegiance to the British Crown.
- **Ideological Shift:** Described by **Mahatma Gandhi** as a "fierce anarchist" in 1907, Aiyar later embraced the path of **Ahimsa (non-violence)**.
- **Literary Pioneer:** Widely regarded as the Father of the Tamil Short Story, he pioneered modern Tamil storytelling through his collection **Mangayarkkarasiyin Kaadhal**.
 - His literary legacy is particularly associated with **Kulathangarai Arasamaram**, a celebrated short story from this collection that is considered a landmark in Tamil literature.
- **Classical Translations:** He helped globalize Tamil literature by translating the **Thirukkural** and **Kamba Ramayanam** into English, and supervised the English translation of Savarkar's *The Indian War of Independence, 1857*.
 - Aiyar deeply admired **Kamban**, the renowned author of the **Kamba Ramayanam**, and regarded him as superior to classical Sanskrit poets **Valmiki** and **Vyasa**.
- **Biographies of Revolutionaries:** To inspire Indian youth, he authored Tamil biographies of global leaders like **Giuseppe Garibaldi**, **Guru Gobind Singh**, and **Napoleon**.
- **Nationalist Education:** Rejecting the British system, he established the **Bharadwaja Ashrama**, a Tamil Gurukulam in **Cheranmahadevi in 1922**, focused on cultural and vocational education.
- **Tragic End:** His life abruptly ended on 3rd June 1925 when he drowned in the Papanasam falls while attempting to save his daughter.

Quark-Gluon Plasma

Source: TH

Researchers at the **Large Hadron Collider (LHC)** have discovered the smallest known droplet of **Quark-Gluon Plasma (QGP)** that still exhibits fluid-like behaviour, challenging existing understandings of how matter behaves at the subatomic level.

- **Understanding QGP: Quark-Gluon Plasma (QGP)** is an extremely hot state of matter made up of **quarks and gluons** , the basic building blocks of matter.
 - A **QGP** is a dense state of matter that existed during the **first few millionths of a second after the Big Bang** , prior to the formation of protons and neutrons.
 - QGP is one of the **hottest substances ever created** , reaching temperatures of **trillions of degrees Celsius** .
 - Scientists create QGP by smashing atomic nuclei together at very high speeds inside the **LHC** .
 - QGP was mainly observed in collisions involving heavy elements such as **lead** .
- **Fluidity Paradox:** Despite consisting of only thousands of subatomic particles compared to the quadrillions of molecules found in macroscopic fluids like water, **QGP behaves like a near-perfect**

fluid with properties like viscosity and flow, rather than acting like a gas.

- **Oxygen Collision Breakthrough:** Scientists collided oxygen nuclei in LHC and found that even this much **smaller system could create QGP**.
 - Oxygen serves as a crucial **middle ground between light protons and heavy lead nuclei** , helping locate the tipping point where independent particles transition into a collective fluid.
- **Evidence of Quark Energy Loss:** Scientists have discovered the smallest-ever QGP that still behaves like a liquid instead of a gas.
 - They found that particles moving through QGP lose energy, showing that it acts as a **dense fluid**.
 - This discovery helps scientists understand how matter changes from a **gas-like state to a liquid-like state at the smallest scales** .

Large Hadron Collider (LHC)

- The LHC, located at the CERN (European Laboratory for Particle Physics) laboratory near Geneva, Switzerland, is the world's **largest and most powerful particle accelerator** .
- Consisting of a 27-kilometre underground **ring of superconducting magnets** , it accelerates beams of protons or heavy ions to nearly the speed of light before smashing them together.
- These extremely high-energy collisions recreate the exact physical conditions that existed fractions of a second after the **Big Bang** , allowing physicists to observe how subatomic particles interact.
- Most famous for enabling the **2012 discovery of the Higgs boson** (the particle responsible for giving other particles mass), the LHC continues to be at the forefront of modern physics, helping scientists unravel the mysteries of **dark matter, antimatter, and exotic states of matter like quark-gluon plasma**.
- **India-CERN Cooperation:** Under a **1996 Department of Atomic Energy (DAE)-CERN protocol** , India joined the **Large Hadron Collider (LHC)** project, contributing hardware, software, and skilled manpower.
