BHASHINI and IISc Develop Text-to-Speech Models for Sourashtra

Source: AIR

The **Digital India BHASHINI Division** under **Ministry of Electronics and Information Technology (MeitY),** in collaboration with **Indian Institute of Science (IISc) Bengaluru,** has developed **AI-based Text-to-Speech (TTS) models for Sourashtra** , a minority Indo-Aryan language spoken mainly in Tamil Nadu.

- **About Sourashtra:** An **Indo-Aryan language** spoken predominantly by the Sourashtra community in **Tamil Nadu** , with approximately **2.48 lakh speakers (Census 2011).**
- **Technology:** Uses **VITS architecture (Variational Inference with adversarial learning for end-to-end TTS)** to convert written text directly into speech.
- **Language and Voices:** The models support **male and female voices** and can process text **written in both Tamil and Sourashtra scripts.**
- **AIKOSH: BHASHINI's AIKOSH platform** hosts the **SPICOR TTS 3.0 Sourashtra** Corpus to support Indian-language AI research.
- **Significance: Supports the use of low-resource languages in digital applications, language learning, accessibility solutions, documentation and research.**

Supreme Court on Religious Conversion and Reservation in India

Source: IE

Why in News?

The Supreme Court of India in ***Secretary to Government v. Sameer Ahamed N. (2026)*** upheld a

Madras High Court decision striking down a 2024 Tamil Nadu Government Order (GO), which had permitted individuals converting from Hinduism to Islam to automatically claim reservation under the Backward Class (Muslim) quota.

- The Supreme Court ruled that **affirmative action under Article 16(4) cannot be claimed solely on pre-conversion backwardness,** as antecedent social backwardness cannot **automatically carry forward into the new religion.**

What is the Supreme Court Ruling Religious Conversion?

- **Non-Transferability of Reservation:** The Court held that reservation is **attached to a constitutionally identified class** and is not an individual's transferable personal entitlement.
  - While **poverty or lack of education** may persist after conversion, antecedent social backwardness under the Hindu caste system cannot be automatically imported into the new religion.
- **Immediate Loss of Status:** Conversion to religions like Islam or Christianity results in the immediate loss of **Scheduled Caste (SC) status under the 1950 Constitution Order.**
- **Theological Incompatibility:** Because Islam and Christianity's foundational doctrines **recognize equality and do not equate to a uniform caste hierarchy,** conversion cannot act as a "one-way bridge" to transport prior caste-based social status into the new religious identity.
- **Invalidity of Private Certificates:** The Court clarified that private religious bodies (such as a Jamath) cannot conclusively determine or certify a person's statutory backward-class or SC entitlement.
- **Reconversion:** In the event of reconversion to the Hindu social order, reclaiming reservation entitlements requires an independent, fact-specific determination by a **competent statutory authority** to verify if the original caste identity has genuinely revived.
  - Muslims and Christians may qualify for BC/OBC reservations if they independently satisfy the applicable eligibility requirements.
- **Expert Recommendations vs. Legislation:** Rejecting the defense that the GO was based on the **Tamil Nadu Backward Classes Commission's recommendation (2024),** the Court ruled that an expert recommendation is not legislation.
  - Any executive order violating Articles 14, 15(4), and 16(4) remains subject to judicial review.

What is the Legal Eligibility Criteria for Scheduled Caste (SC) Status?

- **The 1950 Presidential Order:** SC status is governed by the **Constitution (Scheduled Castes) Order, 1950** , issued under **Article 341** . Paragraph 3 explicitly mandates that: "*No person who professes a religion different from the Hindu, the Sikh or the Buddhist religion shall be deemed to be a member of a Scheduled Caste.*"
- **Strict Exclusions:** Individuals professing Christianity, Islam, Judaism, or Zoroastrianism are legally barred from holding SC status, regardless of historical disadvantage.
- **Constitutional Authority (Article 341):** The President of India specifies the initial SC list. Once published, **only the Parliament** can add or remove communities through legislation.
- **State-Specific Status:** SC status is specific to a State or Union Territory. A community recognized as SC in one state may be an OBC or General category in another.

- **Impact of Conversion and Reconversion:**
  - **Immediate Loss of Status:** The Supreme Court ruled that conversion to any religion outside Hinduism, Sikhism, or Buddhism results in the "immediate and complete loss" of SC status from the exact moment of conversion, regardless of birth caste.
  - **The Concept of "Professing":** The Court clarified that "professing" means publicly practicing. Since Islam and Christianity theologically reject the caste system, one cannot publicly practice them while claiming SC status.
  - **Loss of Statutory Protection:** Converts lose protection under specialized laws like the **SC/ST (Prevention of Atrocities) Act, 1989** .
  - **Rules for Reconversion:** To reclaim SC status by reconverting to Hinduism, Sikhism, or Buddhism, strict proof is required: genuine renunciation of the converted religion, adoption of original caste practices, and clear acceptance back into the original caste community.
  - **Persistent Discrimination:** Despite the legal loss of status upon conversion, it was noted that individuals like the petitioner still face persistent ground-level social discrimination, raising significant concerns about the intersectionality of disadvantage and the gap between theological equality and sociological realities.
- **Key Judicial Pronouncements on SC Status:**
  - **C.M. Arumugam v. S. Rajgopal (1976):** Recognised caste as a social reality but required proof of continued discrimination and community acceptance to retain SC status after reconversion.
  - **Soosai v. Union of India (1985):** Denied SC status to Dalit Christians due to a lack of empirical evidence proving the continuation of caste-based discrimination post-conversion.
  - **Chinthada Anand v. State of Andhra Pradesh (2026):** The Supreme Court reaffirmed that conversion to Christianity results in the immediate loss of Scheduled Caste (SC) status and, consequently, the individual can no longer claim protection as an aggrieved person under the SC/ST (Prevention of Atrocities) Act.
- **Important Commissions on SC Status and Conversion:**
  - **Kaka Kalelkar Commission (1955) & Mandal Commission (1980):** Recognized that caste discrimination extended into non-Hindu religions, paving the way for OBC reservations for certain Christian and Muslim communities.
  - **Justice Ranganath Mishra Commission (2007):** Recommended that SC status be completely de-linked from religion and made religion-neutral, similar to ST status.
  - **Justice K.G. Balakrishnan Commission (Current/2022):** A three-member Union Government commission currently examining the sensitive issue of granting SC status to persons historically belonging to SCs who converted to religions other than Hinduism, Buddhism, and Sikhism.

Contrast with Scheduled Tribes (ST) Status

- **No Religious Bar:** Under the Constitution (Scheduled Tribes) Order, 1950, ST status is **religion-neutral** .
- An ST individual converting to Christianity or Islam **does not automatically lose tribal status** , provided they maintain their tribal customs, identity, and are accepted by their community. Status is only denied if the tribal identity is completely lost post-conversion.

UPSC Civil Services Examination, Previous Year Question (PYQ)

Prelims

Q. Which one of the following categories of Fundamental Rights incorporates protection against untouchability as a form of discrimination? (2020)

(a) Right against Exploitation

(b) Right to Freedom

(c) Right to Constitutional Remedies

(d) Right to Equality

Ans: (d)

Q. If a particular area is brought under the Fifth Schedule of the Constitution of India, which one of the following statements best reflects the consequence of it? (2022)

(a) This would prevent the transfer of land of tribal people to non-tribal people.

(b) This would create a local self-governing body in that area.

(c) This would convert that area into a Union Territory.

(d) The State having such areas would be declared a Special Category State.

Ans: (a)

Mains

Q. Whether the National Commission for Scheduled Castes (NCSC) can enforce the implementation of constitutional reservation for the Scheduled Castes in the religious minority institutions? Examine. **(2018)**

Q. What are the two major legal initiatives by the State since Independence addressing discrimination against Scheduled Tribes (STs)? **(2017)**

Climate Risk Insurance in India

For Prelims: El Niño , Climate Risk Index (CRI) , 16 th Finance Commission , Pradhan Mantri Fasal Bima Yojana (PMFBY) , Parametric insurance

For Mains: Climate Change, Agricultural Insurance, Disaster Risk Financing, Inclusive Growth, Infrastructure Resilience.

Source: TH

Why in News?

The **2026 southwest monsoon** highlighted India's vulnerability to extreme weather, as **El Niño** and regional rainfall deficits coincided with localised extreme rainfall, underscoring the need for **climate risk insurance** to protect vulnerable households and farmers from financial losses.

Summary

- India needs to expand disaster insurance coverage to protect households, farmers and businesses from climate-related financial losses.
- Parametric insurance, catastrophe risk pooling, premium subsidies and climate-resilient urban planning can strengthen disaster risk protection.

What is the Current State of Disaster Insurance in India?

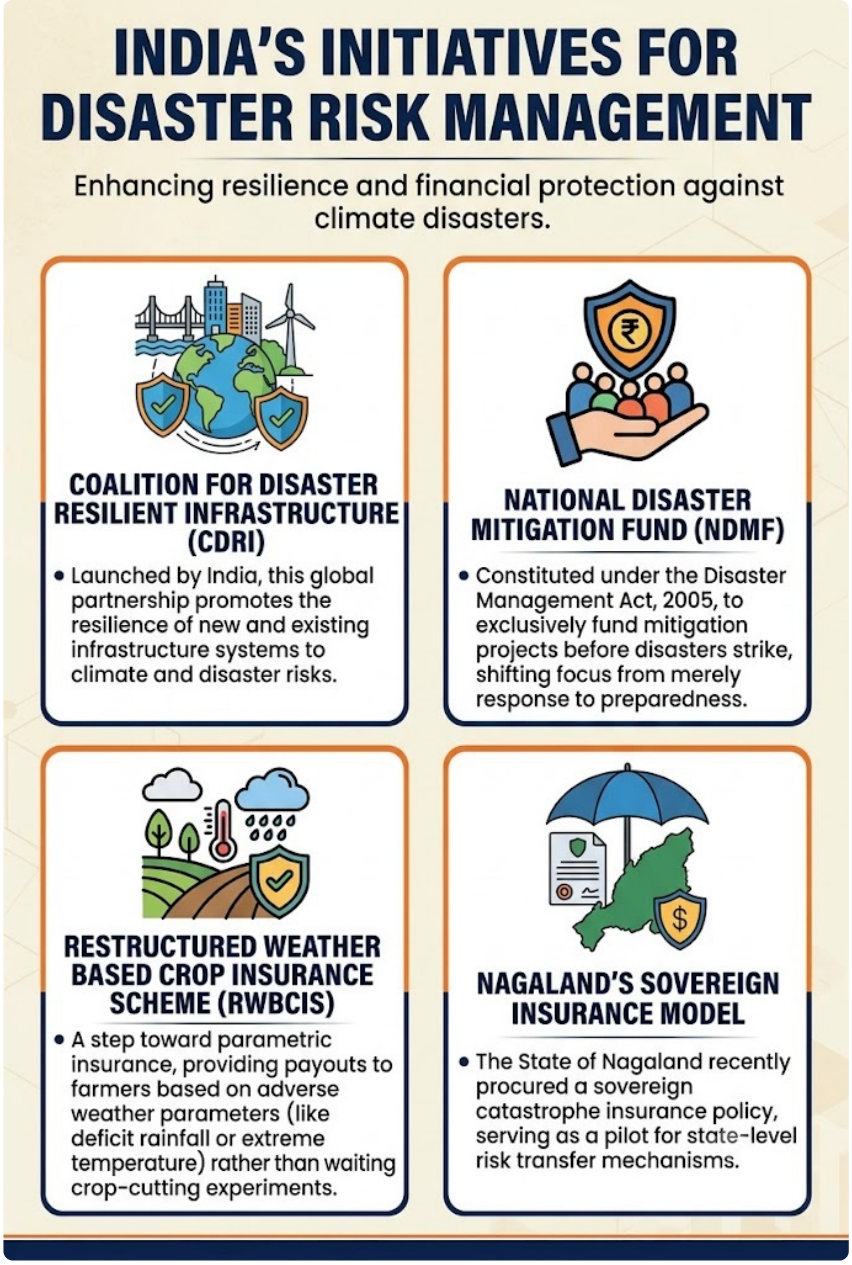

- **High Vulnerability:** According to the **Climate Risk Index (CRI) 2026 ,** India is ranked 15th among countries most affected by **climate change.**
  - Over three decades, extreme weather events have caused an estimated USD 170 billion in losses and affected over a billion people.
  - The Climate Vulnerability Index (CVI), released by the **Council on Energy, Environment and Water (CEEW),** analysed 640 districts in India based on the 2011 Census and found that:
    - 463 districts are vulnerable to extreme floods, droughts and cyclones.
    - Over 45% of these vulnerable districts have experienced unsustainable changes in land use and infrastructure.
    - **183 districts are hotspots,** highly vulnerable to more than one extreme climate event. More than 60% of Indian districts have medium to low adaptive capacity.
- **Protection Gap:** According to reinsurance giant **Swiss Re** , Indian properties worth an estimated **USD 26 trillion to USD 29 trillion** are currently exposed to natural catastrophe risks.
  - Yet, a staggering **93% of this exposure remained uninsured** as of 2022.
  - This domestic crisis mirrors a global trend.
  - Climate disasters act as a risk multiplier for the poor. Studies indicate that 222 million children in India are gripped by the **"double threat" of grinding poverty and climate disaster.**
- **Stagnant Agricultural Coverage:** Crop insurance remains the most widespread form of weather protection in India.

- However, the **16 th Finance Commission** notes that despite the Union and state governments subsidizing 85-90% of premiums under the **Pradhan Mantri Fasal Bima Yojana (PMFBY)** , farmer penetration has stagnated at roughly **40%** over the past eight years.

- **Burden on the Uninsured:** Because disaster insurance outside of agriculture remains at a **nascent stage** (plagued by low awareness and affordability issues), the massive financial burden of recovery falls squarely on individual citizens and the state exchequer.
- **Advances in Risk Modeling:** India is gradually developing sharper catastrophe models to predict climate impacts down to specific pin codes and street levels. However, integrating this data into affordable public protection remains a hurdle.

What are the Challenges in Insuring Climate Disasters?

- **The "Paradox of Knowing More":** The insurance industry is shifting from broad regional risk assessments to hyper-local mapping.
  - For example, Indian risk management firm **RMSI** now uses 80,000 simulated flood events across 28 river basins and 19,000 pin codes. While this allows insurers to understand risks at the street level, it creates a paradox: highlighting **elevated risks in specific neighborhoods can make premiums unaffordable for the residents** who need protection the most.
- **Underwriting Indiscipline:** Industry veterans warn that despite the availability of sophisticated catastrophe models (like those from Moody's and Aon), underwriting discipline (the process of assessing risks and deciding insurance premiums) in India's insurance market is lagging.
  - Fierce competition for market share has led to artificially low, aggressive pricing that ignores unraveling long-term climate realities.
- **Cascading Economic Impacts:** Disasters cause **cross-category losses.** Crop failures, infrastructure damage, and supply chain disruptions act as a **regressive tax on the poor and can trigger macroeconomic instability,** with warnings that mounting weather-related insurance losses could trigger future financial crises.
  - More than **80% of Indians live in districts vulnerable to climate risks,** and repeated disasters continuously disrupt local economies and disproportionately impact low-income households, farmers, and marginalized communities.
- **Advances in Risk Modelling:** India is developing high-resolution catastrophe models to assess climate risks at pin-code and street levels. **RMSI's India FloodRisk Model** covers over 19,000 pin codes and simulates 80,000 flood events across major river basins
  - **RMSI's India Cyclone Hazard Model** provides 1 km × 1 km risk mapping and advanced cyclone forecasting. However, translating these granular risk assessments into affordable insurance and effective public protection remains a major challenge.

What Measures can Ensure Effective Climate Risk Protection?

- **National Catastrophe Risk Insurance Pool:** World Resources Institute research examining 320 adaptation and resilience investments across 12 countries. It reports that every USD 1 invested could generate more than USD 10.50 in benefits over ten years.
  - **UNDP** and **NDMA** have worked on developing a proposed national catastrophe risk insurance pool to aggregate public resources and expand disaster-risk financing. Such a mechanism could distribute catastrophic losses among governments, insurers and reinsurers.
  - This would spread extreme climate risks across the government, domestic insurers, and global reinsurers, keeping retail premiums manageable.
- **Scaling Parametric (Index-Based) Insurance:** Shifting from indemnity-based to **parametric insurance** . If a predetermined weather trigger is breached (e.g., rainfall exceeds 200mm in 24 hours, or cyclonic winds exceed 150 km/h), direct benefit transfers (DBT) should be automatically triggered to the bank accounts of affected populations without waiting for damage assessments.
- **Targeted Premium Subsidies:** The government must step in to subsidize disaster insurance premiums for **Below Poverty Line (BPL)** **households** and marginal farmers.
  - Accurate risk pricing should apply to wealthy coastal real estate, but the state must absorb the risk

premium for the vulnerable.

- **Micro-Insurance Distribution via JAM Trinity:** Leveraging **Jan Dhan accounts, Aadhaar, and Mobile connectivity (JAM)** to distribute bite-sized, low-cost disaster insurance products directly to rural and informal workers.
- **Risk-Informed Urban Planning:** Insurance cannot replace adaptation. Urban local bodies must strictly enforce zoning laws to prevent the construction of affordable housing in floodplains and low-lying areas, thereby naturally bringing down the risk and cost of insurance

Best Practices in Parametric Insurance

- **Regional Risk Pooling:** Initiatives like the **African Risk Capacity (ARC) pool** climate risks to reduce premiums and spread disaster-related losses.
- **Anticipatory Financing:** Fiji and Samoa trigger payouts based on **cyclone forecasts** to fund evacuation and preparedness before disasters strike.
- **Multi-Year Risk Covers:** Nagaland uses disaster mitigation funds to purchase multi-year parametric insurance against landslides and extreme rainfall.
- **Climate-Linked Microfinance:** Rajasthan and Uttar Pradesh use a water balance index to provide automatic loan support to women smallholder farmers during droughts

Conclusion

India must adopt actuarially sound climate risk pricing to discourage development in high-risk zones, supported by sovereign risk pools and targeted premium subsidies to protect vulnerable households and farmers from unaffordable insurance costs.

Drishti Mains Question:

Q. What is the disaster insurance protection gap? Discuss the challenges in expanding affordable climate risk insurance in India.

Frequently Asked Questions (FAQs)

1. What is climate risk insurance, and why is it important for India?

Climate risk insurance provides financial protection against losses caused by extreme weather events such as floods, cyclones and droughts. It helps protect vulnerable households, farmers and businesses from disaster-related financial shocks.

2. What is the climate disaster insurance protection gap in India?

According to Swiss Re, 93% of India's natural catastrophe exposure remained uninsured as of 2022, leaving households and governments to bear much of the recovery costs.

3. What is parametric insurance, and how does it work?

Parametric insurance triggers payouts when predefined weather parameters, such as rainfall intensity or wind speed, cross specified thresholds, enabling faster financial assistance without conventional damage assessments.

4. How does the Pradhan Mantri Fasal Bima Yojana (PMFBY) protect farmers?

PMFBY provides crop insurance against specified agricultural risks, including yield losses caused by natural calamities. Government premium subsidies help make insurance affordable for farmers.

5. How can a national catastrophe risk pool strengthen climate disaster protection in India?

A sovereign-backed catastrophe risk pool can distribute extreme disaster losses among the government, insurers and global reinsurers, helping manage catastrophic risks and improve insurance affordability.

UPSC Civil Services Examination Previous Year Question (PYQ)

Mains :

Q. Discuss the recent measures initiated in disaster management by the Government of India departing from the earlier reactive approach. (2020)

Q. Vulnerability is an essential element for defining disaster impacts and its threat to people. How and in what ways can vulnerability to disasters be characterized? Discuss different types of vulnerability with reference to disasters. (2019)

Q. Describe various measures taken in India for Disaster Risk Reduction (DRR) before and after signing ‘Sendai Framework for DRR (2015-30)’. How is this framework different from ‘Hyogo Framework for Action, 2005’? (2018)

Right to Internet Access is a Fundamental Right

For Prelims: Fundamental right, Articles 21 and 19 of the Constitution , Information Technology (Intermediary Guidelines and Digital Media Ethics Code) Rules, 2021 , IT Act, 2000

For Mains: Fundamental Rights under Articles 19(1)(a) and 21, Balancing individual liberty with reasonable restrictions, Technology as an enabler and a threat to human development

Source: IE

Why in News?

The Supreme Court of India, in ***Just Rights for Children Alliance v. S. Harish (2026),*** held that the **right to access and use the internet is a fundamental right under Articles 21 and 19(1)(a) of the Constitution** , including for children.

- The Court earlier sought responses from the Centre and **National Commission for Protection of Child Rights** on a regulatory framework for children's social-media safety, including privacy-preserving age verification and age-appropriate platform features.
- Concurrently, a 2025 study supported by the **Indian Council of Social Science Research (ICSSR)** and analysis of digital impacts on developing minds have highlighted the urgent need to **balance digital innovation with children's cognitive, emotional, and social well-being in a rapidly changing India.**

Summary

- The Supreme Court recognised children's internet access as a fundamental right, rejecting blanket bans and emphasising proportionate restrictions.
- Child safety requires stronger intermediary accountability, technological safeguards, digital literacy and protection against online exploitation while upholding privacy and digital rights.

How did the Supreme Court Interpret the Right to Internet Access?

- **Fundamental Right Acknowledgment:** The Supreme Court ruled that the right to access and use the internet is a fundamental right enjoyed by children irrespective of their age.
  - The Court emphasized that children's safety and their freedom are not **mutually exclusive.**
- **Rejection of Blanket Bans:** The Court consciously decided against endorsing **blanket bans on minors' social media or internet use,** terming such curbs as "unproven measures of proven disproportionality."
  - It noted that barring children mistakes the victim for the problem and pushes them toward unregulated, unsafe platforms.
- **Constitutional Precedents:**

- ***Anuradha Bhasin v Union of India* (2020):** Protected internet-based freedom of speech, expression, and trade under Articles 19(1)(a) and 19(1)(g).
- **Pragya Prasun v Union of India (2025):** Ruled that digital access is an intrinsic component of the right to life under Article 21.
- **Cricket Association of Bengal (1995):** Established that Article 19(1)(a) includes the right to receive and impart information.
- **Three-Pronged Test for Restrictions:** Any restriction on this fundamental right must be through **enacted legislation, demonstrate a legitimate state interest, and ensure the encroachment is strictly proportionate to the objective.**
- **Targeting the Source, Not the User:** The Court directed that safety measures must target harmful material specifically **Child Sexual Exploitation and Abuse Material (CSEAM)** and its creators, rather than restricting the children themselves.

What are the Impacts of the Digital Environment on Children's Developing Minds?

- **Neurodevelopmental Alterations:** The **prefrontal cortex,** central to sustained attention, impulse control, and decision-making, matures into early adulthood.
  - A 2025 study supported by the ICSSR found that 97.6% of school-going children access the internet from home, primarily via smartphones, spending an average of 4.5 hours per day.
  - High, repetitive digital engagement during this **highly plastic phase can structurally alter brain pathways,** potentially underdeveloping critical cognitive circuits.
- **Attention and Reinforcement Loops:** Social media algorithms use rapid, **unpredictable rewards (likes, shares)** to create continuous reinforcement loops.
- This cultivates an ability to **rapidly shift attention among sources but impairs the capacity to sustain focus on a single task** , making ordinary, offline experiences feel unrewarding.
- **Cognitive Offloading via AI:** While using tools for cognitive offloading is natural, the rapid adoption of Artificial Intelligence (AI) platforms to generate essays, arguments, and ideas risks replacing the "productive struggle" necessary for critical thinking and learning.
- **Frictionless Design:** Features like infinite scrolling, autoplay, disappearing stories and read receipts remove natural stopping cues and create social pressure, encouraging children to consume content continuously and remain constantly connected.
- **Erosion of Boredom:** The constant stimulation of digital devices eliminates idle moments. The **loss of boredom removes the essential cognitive space** required for imagination, reflection, creativity, and the cultivation of a rich inner life.
- **Mental and Physical Health:** Excessive social media use **increases anxiety, depression, loneliness and body-image issues,** disrupts sleep and cognitive development, and may cause irritability and compulsive behaviour when restricted. It can also impair academic performance, real-world social interaction and social skills.

Precedents for Regulating Children’s Social Media Access

- **Global Approaches** : Australia introduced a minimum age of 16 for social media access in December 2025, while Norway has pursued restrictions for users under 16.
- **State-Level Measures:** Karnataka announced an under-16 restriction in March 2026, while Andhra Pradesh proposed restrictions for children below 13.

- **Digital Literacy in Schools** : State education boards are considering digital safety and responsible social media use in school curricula.
- **Grassroots Protection** : **Mission Shakti** promotes awareness among girls and young women about online grooming, privacy and cyberbullying.
- **NCERT Initiatives:** The NCERT Safe Online Learning handbook, school Cyber Clubs and cyber hygiene education promote safer digital practices among students.

What are the Challenges in Regulating Children's Internet Use?

- **Surveillance Risks:** The **DPDP Act, 2023 and DPDP Rules, 2025** require verifiable parental consent for processing children's data and restrict behavioural monitoring and targeted advertising, subject to exemptions.
  - However, self-declared age limits are easily bypassed, while digital KYC and biometric verification may increase data collection, **raising privacy and proportionality concerns under the K.S. Puttaswamy v. Union of India (2017)** judgment , including risks of mass surveillance and data breaches.
- **Low Parental Digital Literacy:** While the regulatory focus often relies heavily on parental supervision, many parents (particularly across diverse socio-economic backgrounds) lack the technical skills needed to configure complex parental controls, manage privacy settings, or monitor algorithmic feeds, rendering parental consent frameworks difficult to implement effectively.
- **Privacy vs. Traceability Conflict:** Rule 4(2) of the **Information Technology (Intermediary Guidelines and Digital Media Ethics Code) Rules, 2021** mandates significant social media intermediaries providing messaging services to identify the **"first originator" of unlawful information (such as CSEAM).**
  - This creates a direct clash between tracing **malicious actors and weakening end-to-end encryption** , which poses constitutional and privacy risks for all citizens.
- **The 'Safe Harbour' Ambiguity:** Under **Section 79 of the IT Act, 2000** , online intermediaries enjoy legal immunity ("safe harbour") for third-party content provided they observe due diligence.
  - However, modern platforms no longer act as passive conduits; through engagement-driven algorithmic curation, auto-recommendation loops, and monetization, they actively **promote content, blurring the line between passive intermediaries and active publishers.**
- **Lapses in Intermediary Reporting and Compliance:** The Supreme Court noted significant failures by platforms in fulfilling statutory reporting obligations.
- While some intermediaries forward reports of **CSEAM** to foreign non-profits like the US-based National Center for Missing & Exploited Children (NCMEC), they frequently fail to report directly to local Indian law enforcement agencies or the Special Juvenile Police Units as required by the **POCSO Act, 2012.**
- **Migration to Unregulated Platforms:** The Supreme Court observed that blanket bans or harsh access restrictions on mainstream platforms are often counterproductive.
- Children do not stop using the internet; instead, they **migrate to shadowy, unregulated spaces, hide their digital footprints,** and become significantly less likely to report grooming or exploitation.
- **Targeting the User Rather than the Perpetrator:** The Supreme Court emphasized that regulatory action must be directed at the harmful content and the syndicates responsible for creating and circulating it, rather than restricting the victims' constitutional rights.
- **Infringement on the Right to Knowledge and Education:** Internet access has been recognized by the Court as a fundamental right under **Article 19(1)(a) (freedom of expression and the right to**

receive information) and Article 21 (right to life).

- For marginalized children, students in remote geographies, and children with special needs, arbitrary or blunt restrictions sever access to educational resources and support systems.

What Measures Can Strengthen Online Safety and Protection for Children?

- **Implementation of a 'Child Mode':** The Supreme Court supported proportionate safeguards, suggesting a **dedicated “child mode” for social media accounts** that is private-by-default, alongside a greater emphasis on parental supervision.
- **National Database and Timely Reporting:** The Court directed the creation of a national Hash and URL Database for CSEAM and appointment of dedicated grievance officers.
  - Platforms must report unknown-origin CSEAM within two hours of removal or complaint resolution, while **known-origin CSEAM must be reported weekly in consolidated reports.**
- **Financial Accountability for Tech Platforms:** To ensure compliance, the Supreme Court called for **exemplary monetary fines for intermediaries that persistently fail to remove exploitative material,** creating direct financial consequences rather than just a theoretical loss of safe harbor immunity.
- **Digital Literacy in the Curriculum:** Schools must provide **digital safety and age-appropriate sex education,** covering topics like consent, safe and unsafe touch, online exploitation, and reporting mechanisms

Conclusion

The Supreme Court’s ruling affirms that **children’s digital freedom and safety must coexist through intermediary accountability** , technological safeguards and digital literacy, rather than blanket bans

Drishti Mains Question:

Q. “Children’s digital rights and online safety must be treated as complementary constitutional objectives rather than competing interests.” Discuss in the context of internet access and social media regulation in India.

Frequently Asked Questions

1. Which constitutional provisions protect internet access and digital freedom in India?

Articles 19(1)(a) and 21 protect freedom of expression, access to information and the right to life, with judicial interpretation recognising the importance of internet access.

2. What is the significance of Section 79 of the IT Act, 2000?

Section 79 provides conditional safe harbour immunity to intermediaries for third-party content, subject to compliance with prescribed legal requirements and due diligence.

3. What is Child Sexual Exploitation and Abuse Material (CSEAM)?

CSEAM refers to material depicting or documenting the sexual exploitation or abuse of children. Its prevention requires prompt reporting, removal, investigation and accountability of perpetrators.

4. What is the key challenge in balancing online safety and privacy?

Age verification and traceability measures may help protect children but can also increase data collection, surveillance risks and threats to end-to-end encryption.

5. Why may blanket social media bans be counterproductive?

They can restrict children’s access to education and information while pushing them towards unregulated digital platforms, making exploitation harder to detect and report.

UPSC Civil Services Examination, Previous Year Question (PYQ)

Prelims :

Q1. 'Right to Privacy' is protected under which Article of the Constitution of India? (2021)

(a) Article 15
(b) Article 19
(c) Article 21
(d) Article 29

Ans: (c)

Q2. Right to Privacy is protected as an intrinsic part of Right to Life and Personal Liberty. Which of the following in the Constitution of India correctly and appropriately imply the above statement? (2018)

(a) Article 14 and the provisions under the 42nd Amendment to the Constitution.
(b) Article 17 and the Directive Principles of State Policy in Part IV.
(c) Article 21 and the freedoms guaranteed in Part III.
(d) Article 24 and the provisions under the 44th Amendment to the Constitution.

Ans: (c)

Mains :

Q. Examine the scope of Fundamental Rights in the light of the latest judgement of the Supreme Court on Right to Privacy. **(2017)**

Reorganisation of CISF

Source: TH

The **Ministry of Home Affairs (MHA)** has approved a landmark overhaul of the administrative and operational framework of the **Central Industrial Security Force (CISF)** , with effect from **1 st November 2026** .

- **Shift to Functional Supervision:** The reorganisation replaces eight geographically organised sectors with sector-specific functional commands, while retaining three existing specialised sectors, aligning CISF operations with sector-specific security threats.
  - **Industrial and Energy Commands:** To strengthen technical expertise and operational efficiency,

dedicated commands have been established: **Coal Sector** (Ranchi), **Steel Sector** (Bhilai), **Petroleum and Natural Gas Sector** (Guwahati), and **Power Sectors** (New Delhi and Kolkata).

- **Urban Infrastructure Consolidation:** The erstwhile National Capital Region command has been restructured into the **GBMM & MRTS Sector** (Government Building, Museums & Monuments, and Mass Rapid Transit System) to standardise urban security frameworks.
- **Dedicated Coastal Commands: To secure maritime trade infrastructure, the Western and Southern territorial sectors have been transformed into the West Coast Port Sector (Mumbai) and East Coast Port Sector (Chennai).**
- **Maritime Compliance under ISPS Code:** The CISF has been designated as a **Recognised Security Organisation (RSO)** for port facilities under the **International Ship and Port Facility Security (ISPS) Code** (an **IMO** framework under the **SOLAS Convention**), enhancing standard operating procedures and technical coordination across major ports.
- **Status Quo for Strategic Assets:** The highly specialised, existing functional arrangements for **Aviation** , the **Department of Atomic Energy (DAE)** , and the **Department of Space (DoS)** will remain unchanged. .
- **Expanded Security Mandate:** The CISF has been entrusted with security responsibilities at high-security correctional facilities in Jammu and Kashmir and designated as the **nodal agency for aerial security of critical infrastructure.**

Central Industrial Security Force (CISF)

- **Background:** The CISF is one of the **Central Armed Police Forces (CAPFs)** in India, operating under the administrative control of the **Ministry of Home Affairs (MHA)** .
- **Establishment:** It was set up in 1969 under the **CISF Act, 1968** with a primary mandate to provide integrated security cover to **Public Sector Undertakings (PSUs).**
- **Evolving Mandate:** Over the decades, its mandate has expanded significantly beyond traditional PSUs to address modern internal security dynamics. Today, the CISF provides security to:
  - Strategic assets like nuclear installations, space establishments, and defense production units.
  - Critical public transport infrastructure, including major Airports and the Delhi Metro.
  - Private sector establishments (enabled by an amendment to the CISF Act following the 2008 Mumbai terror attacks), such as the Infosys and Reliance Jamnagar campuses.
- **Consultancy Wing:** The force also operates a unique consultancy wing that provides expert security and fire protection consultancy services to various private and government organizations.
